DOC/HMD/04		PRODUCTION FORECAST REPORT		 NAMIBIAN AGRONOMIC BOARD	
Effective date:	01 April 2023	Compiled by: Manager: HMD	Approved by: GM: AHMD	Revision no.	00

1. INTRODUCTION

In this production forecast report, the local production for twenty (20) Special Controlled Products (SCP) are forecasted. At the beginning of the report, the inclusion and exclusions for each special controlled product are discussed, of which all importers are advised to comply with this list when importing controlled horticultural products. Next, the tonnage expected to be harvested per production area per crop during the forecasted period is analysed and the producers expected to harvest specific special controlled products are shown in the availability calendar under table 3A – 3D. Subsequently, the surplus and shortages expected for each SCP are shown in table 4 to inform the close and open borders period and the implementation of close and open borders period is forecasted under table 5. It is imperative to note that, the production of special controlled products is monitored by NAB and involves close border period whenever sufficient local production is expected, and the SCP scheme is implemented in line with the market share promotion scheme to stimulate local production of horticultural products in Namibia, as growth a home strategy implemented by the NAB. Thus, the objectives of vegetables production forecast report are:

- ☞ Assist traders and producers to understand special controlled products in surplus or shortage, and inform their buying and planting decisions respectively, **see table 4.**
- ☞ Inform the close and open borders period implementation by the NAB, **see table 5.**
- ☞ Facilitate the market between traders and producers by demonstrating the producers that are expected to harvest certain horticulture commodities during the forecasted period, **see table 3A - 3D.**
- ☞ Effectively disseminate information to all value chain actors and relevant stakeholders in the horticulture industry to observe the local production volume forecasted, area planted per zone amongst others crucial aspect related to production forecasting of SCP, **see table 2A-2C.**

2. INCLUSIONS AND EXCLUSIONS

INCLUSIONS refer to products that are not allowed to be imported when there is sufficient production locally, however, importation can be done during the open border period. The Import permit for special controlled products is valid for 30 days.

Whereas, EXCLUSIONS refer to products that don't form part of a Special Controlled Products scheme and are Allowed to be imported with no restriction. Imported through mixed fruits and vegetable import permit and the permit is valid for 90 days.
